

## Product datasheet

### anti-Perilipin 2 (N-terminus) mouse monoclonal, AP125, lyophilized, purified

#### Short overview

<b>Cat. No.</b>	610102
<b>Quantity</b>	50 µg
<b>Concentration</b>	50 µg/ml after reconstitution with 1 ml dist. water

#### Product description

<b>Host</b>	Mouse
<b>Antibody Type</b>	Monoclonal
<b>Isotype</b>	IgG1
<b>Clone</b>	AP125
<b>Immunogen</b>	Synthetic peptide (aa 5-27 from N-terminus of human adipophilin/PLIN2)
<b>Formulation</b>	Lyophilized; reconstitute in 1 ml dist. water (final solution contains 0.09% sodium azide, 0.5% BSA in PBS buffer, pH 7.4)
<b>Synonym</b>	PLIN2, ADRP
<b>Conjugate</b>	Unconjugated
<b>Purification</b>	Affinity chromatography
<b>Storage before reconstitution</b>	2-8°C until indicated expiry date
<b>Storage after reconstitution</b>	Up to 3 months at 2-8°C; long term storage in aliquots at -20°C; avoid freeze/thaw cycles
<b>Intended use</b>	Research use only
<b>Application</b>	IHC, WB
<b>Reactivity</b>	Dog, Human, Rat
<b>No reactivity</b>	Bovine

#### Applications

<b>Immunohistochemistry (IHC) - frozen</b>	1:10-1:100 (0.5-5 µg/ml)
<b>Immunohistochemistry (IHC) - paraffin</b>	1:10-1:100 (0.5-5 µg/ml); microwave treatment recommended)
<b>Western Blot (WB)</b>	1:50-1:100 (0.5-1 µg/ml)

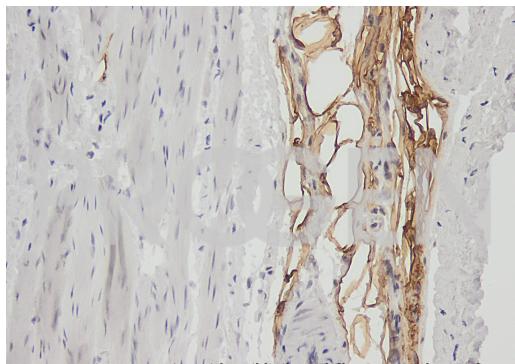

#### Background

Perilipin 2/Adipophilin/ADRP/PLIN2 is a ubiquitous component of lipid droplets. It has been found in milk fat globule membranes and on the surface of lipid droplets in various cultured cell lines; inducible by etomoxir. Enhanced expression of Perilipin 2/Adipophilin/ADRP/PLIN2 is a useful marker for pathologies characterized by increased lipid droplet accumulation. Such diseases include atheroma, steatosis, obesity and certain cases of liposarcoma. It also seems to be a potent marker for atherosclerosis. ADRP can also be used to study virus entry via lipid droplets. Polypeptide reacting: Perilipin 2/Adipophilin/ADRP/PLIN2, MW 48,100 (calculated from aa sequence data); apparent Mr 52,000 (after PROGEN Biotechnik GmbH | Maaßstraße 30 | D-69123 Heidelberg

SDS-PAGE); pI 6.72. Immunolocalization: Perilipin 2/Adipophilin/ADRP/PLIN2 is positively detected in the glandular cells of lactating mammary gland (ductal cells are negative), zona fasciculata of the adrenal gland, Sertoli cells of the testis, and in fat-accumulating hepatocytes of alcoholic cirrhotic fatty liver; adipocytes are negative. Also positively stained are lipid-storing CD 68-positive macrophages. Tested cultured cell lines: PLC, MDCK.

Western blot analysis of HepG2 cell lysate with anti-Perilipin 2 antibody. Western blot analysis was performed on 15 µg HepG2 lysate and 15 µg HepG2 + OA lysate. Cells were previously treated with 400 µM oleic acid (OA) if indicated. Cells were lysed in RIPA buffer. The PVDF membrane was blocked with 5% dry milk in PBST for 1 h at RT. The primary antibody anti-Perilipin 2 (N-terminus) mouse monoclonal, AP125 (Cat. No. 690102) was diluted in blocking buffer (antibody concentration 0.5 µg/ml) and incubated at 4°C over-night. The secondary antibody goat anti-mouse IgG polyclonal, HRP conjugate was also diluted in blocking buffer (antibody concentration 0.2 µg/ml) and incubated for 1 h at RT. The bands were visualized by chemiluminescent detection using PierceTM ECL Western Blotting Substrate.
