

Product datasheet

anti-AAV VP1/VP2/VP3 mouse monoclonal, B1, supernatant

Short overview

| | |
|-----------------|-------|
| Cat. No. | 65158 |
| Quantity | 5 ml |

Product description

| | |
|----------------------|---|
| Host | Mouse |
| Antibody Type | Monoclonal |
| Isotype | IgG1 |
| Clone | B1 |
| Immunogen | AAV2 capsids |
| Formulation | Contains 0.09% sodium azide |
| Conjugate | Unconjugated |
| Purification | Hybridoma cell culture supernatant |
| Storage | Short term at 2-8°C; long term storage in aliquots at -20°C; avoid freeze/thaw cycles |
| Intended use | Research use only |
| Application | Affinity chromatography, Dot blot, ICC/IF, IP, WB |
| Reactivity | AAV1, AAV2, AAV3, AAV5, AAV6, AAV7, AAV8, AAV9, AAVDJ, AAVrh10 |

Applications

| | |
|----------------------------------|--|
| Affinity Chromatography | Assay dependent |
| Dot Blot | Assay dependent (denaturing conditions) |
| Immunocytochemistry (ICC) | Assay dependent |
| Immunoprecipitation (IP) | Assay dependent (precipitation of mainly free VP proteins) |
| Western Blot (WB) | 1:25-1:200 |

Background

The B1 antibody reacts with free VP1, VP2 and VP3 of adeno-associated virus (AAV) and at a reduced degree with assembled viral particles. VP1 and VP2 are highly enriched in the nucleus, while non-assembled VP3 is evenly distributed in the nucleus and the cytoplasm. Epitope mapping experiments (Wobus et al., 2000) identified aa726 to aa733 (C-terminus; common to all 3 VP proteins) as the specific binding region. The antibody is also useful for characterization of different stages of infection. Wobus, C. E. et al. Monoclonal antibodies against the adeno-associated virus type 2 (AAV-2) capsid: epitope mapping and identification of capsid domains involved in AAV-2-cell interaction and neutralization of AAV-2 infection. J. Virol. 74, 9281-93 (2000).
