

Product datasheet

anti-Lassa Virus GP2 mouse monoclonal, EBS-I-304, purified

Short overview

Cat. No.	691651
Quantity	1 ml (100 µg/ml)
Concentration	100 µg/ml

Product description

Host	Mouse
Antibody Type	Monoclonal
Isotype	IgG1 kappa
Clone	EBS-I-304
Immunogen	Gamma rays inactivated strain LASV
Formulation	PBS with 0.02% sodium azide
Conjugate	Unconjugated
Purification	Affinity chromatography
Storage	2-8°C
Intended use	Research use only
Application	ELISA, ICC/IF, IHC, WB
Reactivity	Lassa virus

Applications

ELISA	Assay dependent
Immunocytochemistry (ICC)	1:100-1:200 (0.5-1.0 µg/ml)
Immunohistochemistry (IHC) - frozen	1:50-1:100 (1-2 µg/ml)
Western Blot (WB)	1:50-1:100 (1-2 µg/ml)

Background

Lassa virus is a member of the Arenaviridae and causes Lassa fever in predominantly West Afrika. The main reservoir is formed by local rodents. Up to half a million people are estimated to attract the disease yearly and mortality rates may reach as much as 50%. Viral proteins, coded within two ambisense RNA strands, include GP1, GP2, NP, polymerase and Z matrix protein. EBS-I-304 reacts with GP2, which connects the viral envelope to NP and Z matrix proteins found in the core.

Positive control: cells, serum or tissues infected with Lassa virus.
